

The Mayors' Commission on Climate Change

A Green and Growing Capital Region

Mobility Strategy Recommendations

In order to reach Carbon Zero by 2045, the Mobility Technical Advisory Committee recommends the following strategies as top priorities to the Mayors' Commission on Climate Change for review and action.

Active Transportation

Expand and enhance accessibility to low-stress connected infrastructure for walking and rolling, prioritizing improvements that address specific community and neighborhood concerns and needs, so that 30% of all trips are by active transportation by 2030 and 40% by 2045.

Transit & Shared Mobility

Expand and improve transit and shared mobility services to be more accessible, affordable, timely, and attractive than single occupancy vehicle use so that 30% of all trips are by transit and pooled shared mobility by 2030 and 50% by 2045.

Zero-Emission Vehicles

Develop a comprehensive package of incentives, disincentives, and policies to encourage the adoption of zero-emission vehicles (ZEVs) so that 70% of new vehicle registrations will be for ZEVs by 2030 and to achieve 100% electrification of all public, private, and shared fleets by 2045.
